Purpose

This Ute Indian Water Right Supplement is prepared pursuant to and in accordance with the proposed agreement between the Ute Indian Tribe of the Uintah and Ouray Indian Reservation and the State of Utah concerning the water rights claims of the Ute Indian Tribe. The purpose of this water rights supplement is to more fully define and clarify all reserved water rights of the Ute Indian Tribe.

Forward

In December, 1960 the Ute Tribe submitted to the Utah State Engineer a report entitled Water Right Claims, Uintah and Ouray Indian Reservation, Utah. This report was prepared to identify both the Tribe's present irrigated acreage and also those lands that appear potentially irrigable, for which a water right is claimed under the doctrine expressed in Winters v. United States, 207, U.S. 564 (1908). The acreages denoted in the Decker report were used as the basis for this Water Rights Supplement.

In the Decker Report the lands were placed into seven different groups for identification purposes and these designations of land groups have been retained in this supplement. Following is an explanation of the seven different land groups.

Group (1): Lands included within the Uintah Indian Irrigation Project, the water right to which has been certificated by the State of Utah and also covered by Federal Court Decrees. This group includes those project

lands served from the Lakefork, Yellowstone, Uinta and Whiterock Rivers.

Group (2): Lands included in the Uintah Indian Irrigation Project, the water right to which has been certificated by the State of Utah. This group includes project lands served from the Duchesne River, including the townsites of Duchesne, Randlett and Myton.

Group (3): Lands that are or can be served from the Duchesne River through the facilities of the Uintah Indian Irrigation Project which have not been certificated by the State of Utah.

Group (4): Lands which have been found to be productive and economically feasible to irrigate from privately constructed ditch systems diverting from the Duchesne River or its tributaries above the Pahcease Canal, now in operation or to be constructed.

Group (5): Lands which have been found to be productive and economically feasible to irrigate and are proposed to be included in the ultimate phase of the Central Utah Project.

Group (6): Lands lying east of the Green River and to be served from the White River for which Applications to Appropriate water were once filed with the State of Utah.

Group (7): Lands lying east of Green River which have been found to be productive and economically feasible to irrigate from privately constructed ditch systems now in operation or to be constructed. This group consists of lands along the Green River, White River, Willow Creek, Bitter Creek, Sweet Water Creek and Hill Creek.

A summary of the Ute Indian Tribe's total irrigable acreage, maximum allowable depletion and diversion requirement for each of the land groups, by stream, are contained in Tables 1, 2 and 3, respectively.

Delivery schedules specifying the quantity of water to be diverted from the various streams are shown in tables 4 through 8. The quantity of water to be diverted into the various canals and/or ditches shall be determined based on the irrigable acreage as shown in the acreage tabulation, times the flow rate per acre corresponding to the period of time on the appropriate delivery schedule.

For the group 1 lands the diversion requirements is 3.40 acre-feet per acre, of which 3.00 acre-feet per acre is to be supplied from direct streamflow in accordance with the appropriate delivery schedule and the remaining 0.40 acre-feet per acre is to be supplied from storage under the proposed Uintah and Upalco Units of the Central Utah Project. Such water delivered from storage shall assume the priority date of the Water and Power Resources Service (Bureau of Reclamation) water right to facilitate the equitable allocation of water to all subscribers of the projects.

Within the group 1 lands there are 9,300 acres commonly referred to as the Midview Exchange lands. As a result of this exchange these lands are now served from the Duchesne River and thus have a diversion requirement of 4.0 acre-feet per acre. Water for these lands shall be supplied in accordance with terms of the Midview Exchange Agreement.

The priority date of the group 1 through 4 lands is October 3, 1861. Those group 5 lands proposed to be developed in place are to be supplied from storage water under the proposed Uintah Unit of the Central Utah Project. Such water delivered from storage shall assume the priority

date of the Water and Power Resources Service (Bureau of Reclamation) water rights to facilitate the equitable allocation of water to all subscribers of the project. The priority date for those group 5 lands to be transferred to Leland Bench and supplied from the Green River shall be October 3, 1861. The priority date of the group 6 lands is January 5, 1882 and the priority date of the group 7 lands is as denoted in the acreage tabulation.

The acreage tabulations herein lists the land group, source of supply, canal or ditch (if applicable), point of diversion, irrigable acreage and place of use. Also, for the group 7 lands the priority date is listed. Of that acreage described in the place of use column only that quantity of land listed in the irrigable acreage column can be irrigated.

Municipal and Industrial Water

In addition to the quantities of water set forth herein for the irrigable acreage of the Ute Indian Tribe, the United States of America in trust for the Ute Indian Tribe is allocated the depletion of 10,000 acre-feet of water annually for municipal, industrial and related purposes.

Within this quantity of water all existing municipal, domestic, industrial or related uses of the Ute Indian Tribe and its members shall be satisfied and any water remaining to be developed shall be diverted from the Green River near Ouray, Utah. The priority date for the water provided for under this paragraph is October 3, 1861.
